What are learning objects?

- Standalone resource
- Support learning and teaching
- Re-usable

Should I use the information on this web site?

Yes? No? No / Don't know? No / Don't know? No / Don't know? No / Don't know?

Is it directly relevant to my topic? If yes, get distracted while surfing the web; don't waste time reading irrelevant information.

Is it hosted by an organisation? If you can't identify an author or organisation, look elsewhere for information.

Is the author an authority in the field? You should only use information if you can be sure it was written by a respected author or organisation. If not, look elsewhere.

How to quote from another author

Identify the source text you want to quote

Here are some actions that you might do when writing a piece of work. Drag and drop the action into the appropriate area of the whether or not you would need to provide a reference:

Copy text from another source	Include a table of data or a diagram from another source	Mention a fact which is commonly known
Discuss the ideas or research of another person in your own words	Write about something you know you've read about somewhere but you can't remember where	Paraphrase the ideas from two separate sources linking them together using your own words
Write about your own opinions on a topic	Present the results of your own experiment or survey	
Reference required		No reference required
