- Mendeley es una aplicación web y de escritorio, propietaria y gratuita. Permite gestionar y compartir referencias bibliográficas y documentos de investigación,¹ encontrar nuevas referencias y documentos y colaborar en línea. Mendeley combina Mendeley Desktop, una aplicación de gestión de referencias bibliográficas y de documentos en formato PDF (disponible para Windows, Mac y Linux) con Mendeley web. Ambas aplicaciones son la base sobre la cual se ha creado y desarrollado una red social en línea de investigadores, similar a lastfm en cuanto a funcionalidades para identificar, capturar, etiquetar, clasificar y referenciar artículos científicos y académicos.^{2 3 4} Su comunidad está formada por 3 millones de usuarios y dispone de una base de datos con más de 100 millones de referencias. Desde 2013 pertenece al grupo editorial Elsevier.

Abstract

Oral canine malignant melanoma (CMM) is a spontaneously occurring aggressive tumour with relatively few medical treatment options, which provides a suitable model for the disease in humans. Historically, multiple immunotherapeutic strategies aimed at provoking both innate and adaptive anti-tumour immune responses have been published with varying levels of activity against CMM. Recently, a plasmid DNA vaccine expressing human tyrosinase has been licensed for the adjunct treatment of oral CMM. This article reviews the immunological similarities between CMM and the human counterpart; mechanisms by which tumours evade the immune system; response to melanoma in an
